23 April Update

Hello, This is the list of features I wanted to implement as a to-do list.

- ☒ Document Parsing
- ☒ Document Conversion and Independent Rendering
- ☒ Filesystem Management
- ☒ Offline Support and Sync
- ☒ Version Control and Management
- ☒ Multi-format export
- ☒ Better editor
- ☐ Implementation of Language Servers
- ☒ Document Hiearchy
- ☒ Project Management
- ☐ User Roles and Permission
- ☐ Real-Time Collaboration
- ☐ Templates

Whats been done since last update?

- I created a much better editor with slate.js and react. Although it could look a little better.
- All the actions are done using an API now.
- Actually added a name for this project, “Dotei”, It a rough translation of Kinematic/Dynamic from Japanese
- Project Management
- an Outline View
- Much better export menu
- Added Manual control for Live Preview
- Added User Management
- The main home/landing screen needs work, its basic for now.
- Centered a button which took my teammates two weeks.
